YELLOW DOG BIKE FITTING SYSTEM:

The Yellow Dog Custom Bike Fit System is a 5-contact point methodology that starts at your cleat/pedal placement and works its way up through the knees and spine, to the saddle, and all the way to the elbows and hands. This coordination of checking and rechecking adjustments allows us to make changes to your current bike setup by modifying or changing components and putting you in the best-desired position within the limits of your existing frame. This detailed process will accurately locate and adjust components properly, all the while maximizing your power, efficiency, comfort, and control in your riding experience. The Yellow Dog Fitting System is the first mobile bike fitting service in Connecticut, a process refined over the past sixteen years while within the bicycle industry.
